

ABSTRACT OF THE DISCLOSURE

The present invention relates to a combination convertible article useful as a jacket and tote bag in one in which the jacket is reversible. It is designed to be a convenient and practical jacket suitable for light travel and active wear. The said jacket can quickly be turned into a tote bag by executing maneuvers that are basic and simple. The jacket has as a part of its structure two large sheets of material forming a back piece that functions as a sack with one of the surfaces having an opening leading to a sack portion . The sack portion can be inverted to secure the jacket into the sack, thus forming the tote bag structure. The jacket is reversible and is worn in the reversed mode at which the sack and the sack opening on the said back portion is then protected without the use of closing devised or fixtures and the appearance of the said sack is completely concealed.
